CHROMATOGRAM & SAMPLE REFERENCE

HPLC CHROMATOGRAM — RT 0.849 / 6.513 / 7.163 min

VIAL AS RECEIVED · PHOTOGRAPHED 11 NOV 2026

> **How to read this.** Chromatographic purity is the percentage of total integrated peak area — how much of the detected material is the target peptide versus impurities. It is **not** a measure of net peptide mass content (what fraction of the powder is peptide versus counter-ion, water, or residual solvent). That mass content is measured separately and reported above as **content per vial** (mg net peptide). Results apply only to the sample submitted.
